

The Ivy Edge Research Program: Structure

The Program offers a **personalized, project-based research experience** that empowers you to explore your interests and gain **valuable real-world skills**.

Through **ten (10) one-on-one sessions with a PhD-level mentor**, you will design and complete a unique research project that showcases your passions and talents.

At the end of the project, students are encouraged to share their work by submitting for publication, competing in science fairs, and more!

In addition to your mentor sessions, the research program includes:

- A dedicated online workspace where students can chat with their mentor, schedule sessions, save shared resources, keep track of assignments & more
- Support from our dedicated team of student success specialists
- Two (2) rounds of detailed writing feedback
- Access to the Showcasing Opportunity database to find outlets to share your work
- Option to request a mentor Letter of Recommendation

A typical student journey based on the five project milestones:

Session 3: Research question

Session 4: One-page outline of project

Session 6: Draft of half of the project

Session 9: First draft of entire project

Session 10: Final draft submission
